

## TRY THESE 5 THINGS

### REEFING (Full batton)

1. If you ask yourself “reefing or not?” is the answer “which reef?”.
2. In best case your reef is already settled in the marina. To reef at sea, sheet genoa in, steer close hauled, veer main sheet.
3. Main halyard tight/veer, bring reef in position. All bolt ropes are loose. Tight luff first. Followed by foot of sail and leech. The new clew as close as possible to the boom. Check main sail about chafing spots at reefing points.
4. Always keep tension in leech to avoid horizontal powers to the mast cars. Prolong their lives. Check at mast.
5. A tight leech is contra to the luff.
